

Internship in Physical Organic Chemistry

Lab Journal

Prepared by Dr. Alexandra Tsybizova

Print one copy of this template per experimental session. Fill it in **during** the session — not afterwards. Use the back of the page or attach extra sheets if you need more space. After each session, photograph or scan the completed pages and place them in your `week02/labjournal1/` folder.

Date: _____

Experimenter: _____

Session type: ☐ Instrument training ☐ Sample preparation ☐ Spectral acquisition
☐ Data analysis ☐ Other: _____

1. Objective

Write 1–2 sentences stating what you intend to do and why. Write this *before* you start.

2. Procedure as executed

Record what you actually did, step by step, as you do it. Include quantities, concentrations, instrument settings, and the names of all files saved. If you deviated from the plan, record the deviation and the reason.

Files saved during this session:

File name	Description

Backup completed: ☐ Yes **Location:** _____

3. Observations

Record what you saw, as you saw it. Write observations directly: *a peak appears at m/z XXX* not *the compound fragmented as expected*. Separate observations from interpretations — use the second column for tentative interpretations.

Observation (what the instrument showed)	Tentative interpretation (what you think it means)

4. Preliminary conclusions and next steps

Written at the end of the session. What do your observations suggest? What must be done next, and why?

Session complete: ☐ Yes

Outstanding questions for supervisor:
